Innovation and Sustainability

DeposSpain® steel tanks are the ultimate solution for water storage across a wide range of applications, renowned for their **exceptional resistance to corrosion**.

Furthermore, we have integrated significant innovations, such as an **improved roof design** and a state-of-the-art **waterproofing system**. We offer a wide range of capacities and dimensions tailored to meet the specific needs of each customer (from 13 m³ to 5,000 m³, equivalent to 5 million liters).

With DeposSpain®, we are committed to providing water storage solutions that are not only efficient and practical, but also environmentally friendly.

Water tank features

Constructed of corrugated sheet with **ProMag coating**, renowned for its exceptional corrosion resistance, surpassing standard galvanized steel by up to 10 times and galvanized steel Z-600 (600g/m²) by almost 5 times. Option with pre-lacquered green sheet metal available.

High-quality 8.8 bichromated **bolts** are used.

Diameters range **from 3.82m to 45m**. For other dimensions, please contact our sales department.

All diameters are available with **one, two, three or four wall rings of height**. Each wall ring is 1.14 m. high (for different heights, please contact our sales department).

The **thickness of the sheets** varies depending on the water tank model, ranging from 1 mm to 4 mm.

The **joints are sealed** with white mastic (preformed butyl sealant) with a diameter of 6 mm, resistant to temperatures ranging from -30° C to 120° C.

Different possibilities

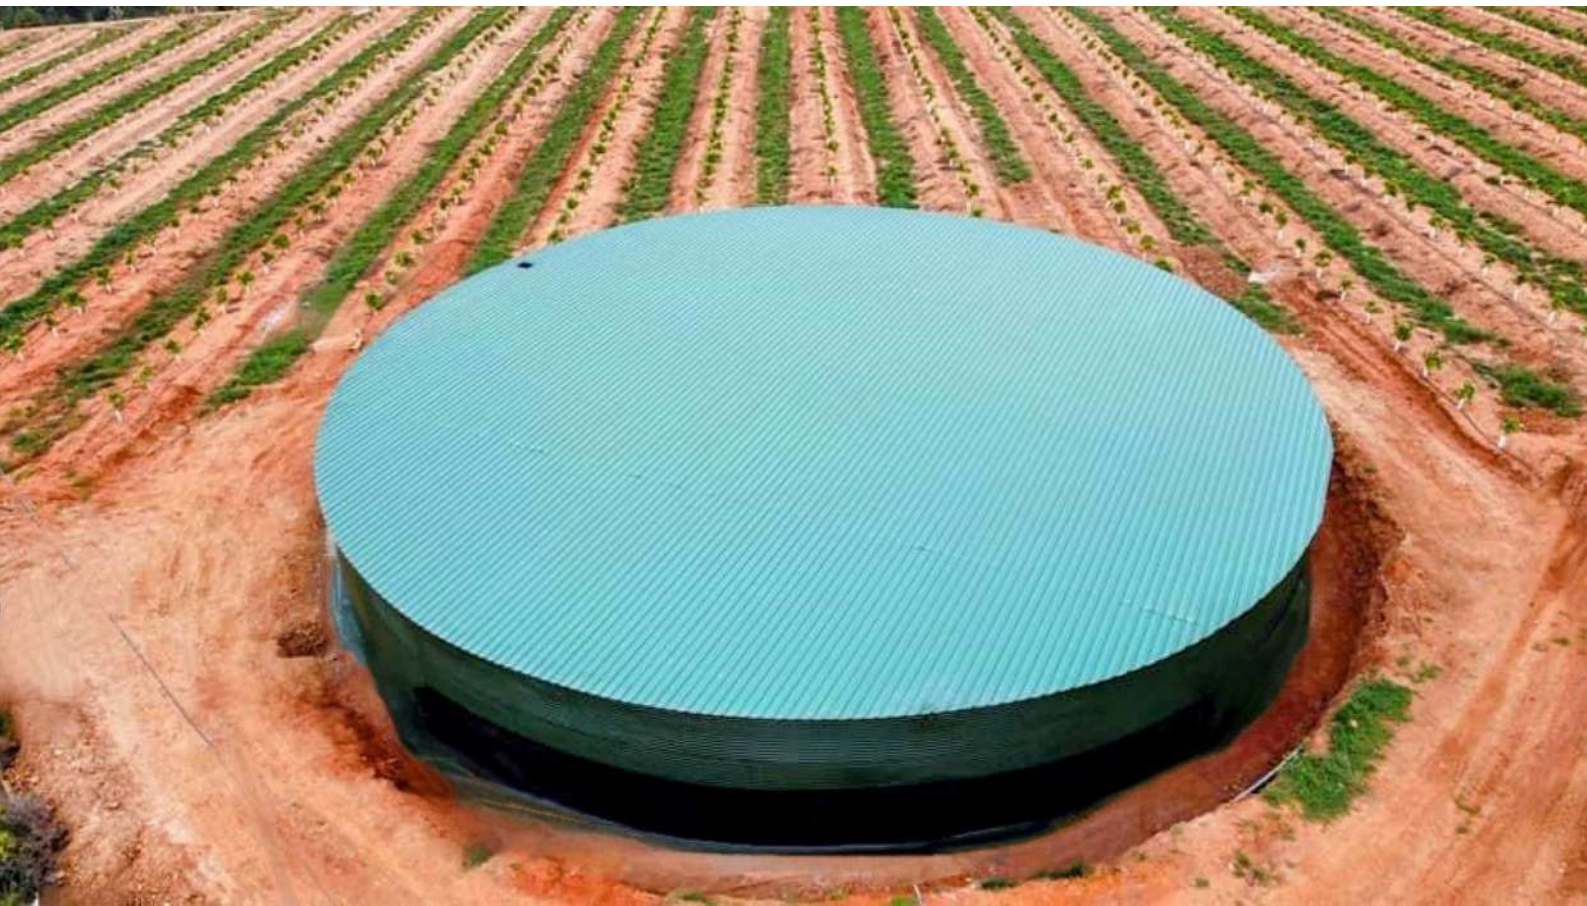

Roof

We have designed flat roofs with a slight slope for all tank models, ensuring efficient water drainage and minimizing the risk of sediment accumulation. This innovation not only enhances the functionality of our tanks but also extends their lifespan by preventing corrosion and deterioration issues.

Option for conical silo-type roof.

Waterproofing

Choose our PVC waterproofing lining option for maximum waterproofing and protection of stored water. This membrane acts as a robust barrier against water penetration, ensuring that the stored liquid remains safe and clean at all times

Different possibilities

Green Pre-lacquered

We offer green pre-lacquered water tanks available, often required for water tanks located in protected natural areas, to comply with the regulations on environmental impact that are in force in some areas.

Nonwoven Geotextiles

For irregular surfaces requiring greater resistance, consider our special bottom materials like Non-Woven Geotextile GEODITEX.

Access Ladder

Optionally the tank can be equipped with an internal ladder, including safety rings to conform with regulations.

Additional information

We provide plans for the installation of the water outlet pipe and cleaning.

Gandaria offers assembly service in any region of Spain and Portugal. Request a non obligation quote!

Why choose DeposSpain®

Durability and corrosion resistance

They comply with European regulations in C1 to C5 environments, offering an estimated useful life between 20 and 40 years.

Great versatility

Their versatility makes them suitable for a wide range of applications, from drinking water storage and agricultural irrigation, to fire prevention, wastewater and cleaning in industries such as olive oil, poultry, viticulture, slaughterhouses, and oil mills. Additionally, these tanks are suitable for use in various industrial processes, demonstrating their ability to meet a variety of needs.

Easy installation and maintenance

They stand out for their simple installation, which does not require heavy machinery, and minimal maintenance, aspects that significantly reduce long-term costs.

Environmentally responsible

They are made of corrugated sheet with ProMag coating, a more environmentally friendly option that uses less zinc than conventional galvanizing processes.
